

Ecobuild, March 6 - 8, ExCeL London, District Energy, we returned to Ecobuild after a successful show in 2017. We will be available to discuss the importance of enhanced filtration, water treatment, automation and effective control within district heating and cooling energy networks. **Stand E169**, www.ecobuild.co.uk

Education Estates and Facilities Conference 2018, June 26th:
Building a better future.

“Having enough school places in safe, high-quality buildings in the right areas is a crucial part of the education system. Significant challenges remain as the population continues to grow and the condition of the ageing estate deteriorates.” - National Audit Office.

www.salford.ac.uk/onecpd/conferences/education-estates-and-facilities-conference

We attended **MENE** in July 2017 with a focus on the Process and Industrial sectors in the North East, please visit stand **C29** this year to find out how other manufacturers and their process applications have benefited from our technologies. www.mfgengineeringshow.co.uk

Healthcare Estates Management Conference 2018, July 10th:
The future of health infrastructure.

“Without investment in the NHS estate the Five Year Forward View cannot be delivered, the NHS estate will remain unfit for purpose and will continue to deteriorate.” - The Naylor Review

ADVANCED WATER TECHNOLOGY

EnwaMatic®

Side stream filtration
Corrosion inhibition
Scale control
Restricts bacteria
Air separation

Fully Automated
Self-regulating
chemistry
BMS VFC / Modbus
interfaces
Reliable, Robust,
Assured.
Closed system, HVAC.

Bespoke units;

High temperature,
High pressure,
High volumes.

Process CHW systems with Glycol recovery system 'BAF'.

Bespoke Superyacht 'White' specification shown above.

We have worked with the Higher Education sector in the UK for over 18 years, helping Estates Engineers to ensure they have BSRIA compliant water quality within their HVAC and District Energy Networks. Our robust preventative maintenance approach, has resolved water quality issues and restored design efficiencies. We will be available during the conference to discuss the improvements and benefits we have made and look forward to meeting the conference delegates in September 2018. www.aue.ac.uk

We are excited to exhibit at Build2Perform this year, **Stand 217** and we will be available to discuss the critical specifying criteria needed for effective filtration and water treatment for HVAC systems www.build2perform.co.uk

In the meantime, if you would like to learn more please contact mandie.fowkes@enwa.com to book your CPD seminar or technical product presentation.

ENWA Water Technology ADVANCED WATER TECHNOLOGY

Course: The importance of effective filtration and water treatment for heating and cooling systems. 

The seminar focuses on water quality requirements for modern HVAC systems. Highlighting the key issues which threaten new build and refurbishment projects and how to reduce these risks. The positive impacts of effective water treatment and filtration on performance, resilience and lifespan illustrated through case studies. The role of automation, effective control and management and how short comings in design and procurement can adversely affect project commissioning, completion, warranty and legacy stages. The impact on life cycle costs, energy efficiency and the environmental implications of failing strategies.

ENWA Titanium AOP Advanced Oxidation Process

Cost effective and Environmentally friendly.

'Gatekeeper', solution for disinfection of drinking water and process cooling water applications.

ENWA UV-C range.

Fresh, safe potable water, standard and tailored solutions for the Food and Beverage Industry & HVAC applications.
